

## Emergency Water Supply Plan

The Emergency Water Supply Plan can be used by staff, emergency response personnel, and state or local agencies in the event of a disaster or other water supply emergency. The Emergency Water Supply Plan contains a snapshot of the water supply; identifies an alternative supply of drinking water; and contains an inventory of water supply emergency personnel, support, and equipment.

MDH recommends completing this form, keeping the form up-to-date, and having it available in case of an emergency. It is also recommended that the system’s most recent sanitary survey, including the client inventory page, be attached to this document.

### Emergency Personnel, Equipment and Material Inventory

Contact	Name	Phone	Response Time/Comments
<b>Responsible Party</b>			
<b>Water System Personnel</b>			
<b>Alternate Water System Personnel</b>			
<b>Plumber</b>			
<b>Electrician</b>			
<b>Backhoe Operator</b>
